

A Acoustic acquisition and recording representation

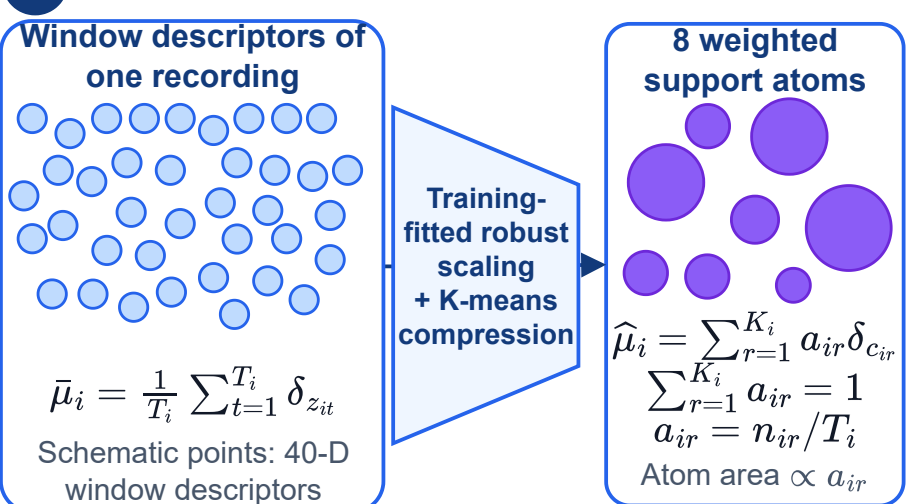

1 Complete acoustic recording

2 Window segmentation and 40-D descriptors

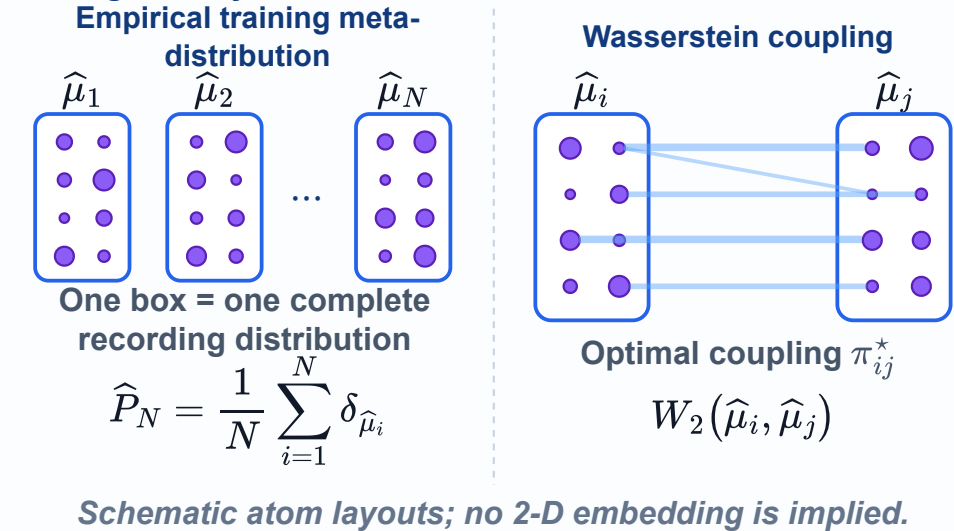

3 Recording distribution and support compression

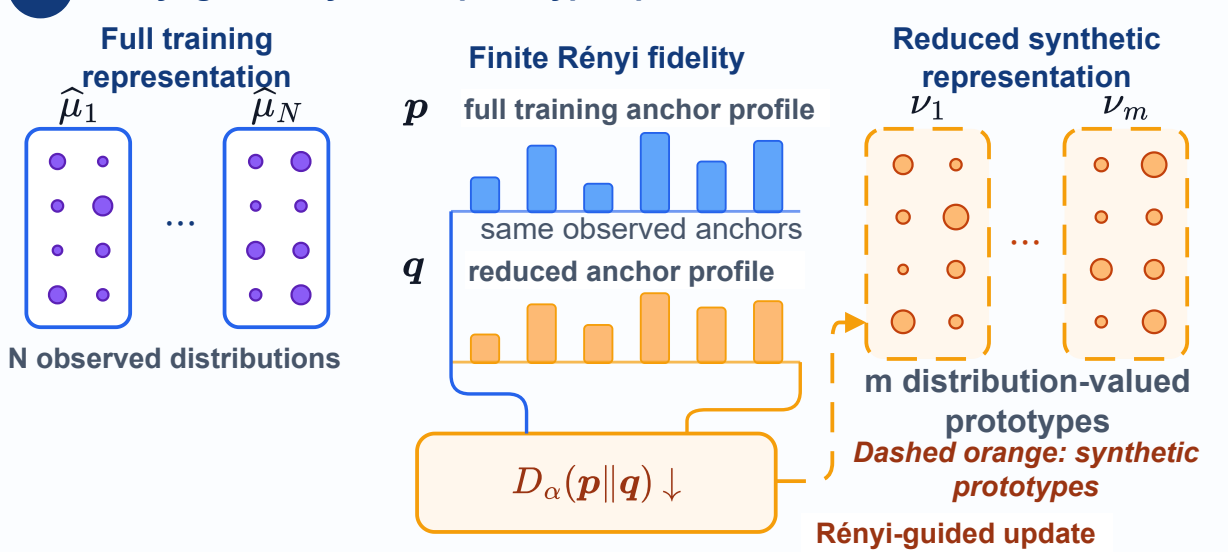

B Meta-distribution geometry and synthetic prototype optimization

4 Empirical training meta-distribution and Wasserstein geometry

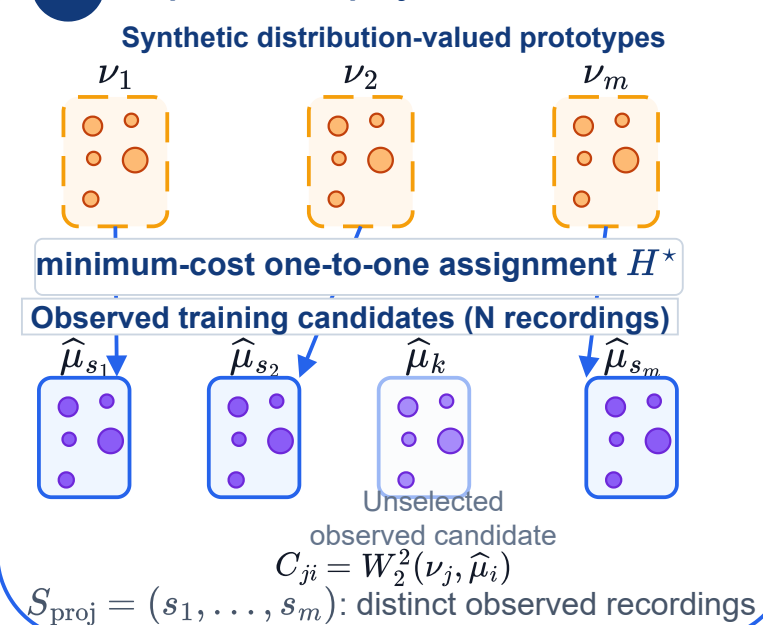

5 Rényi-guided synthetic prototype optimization

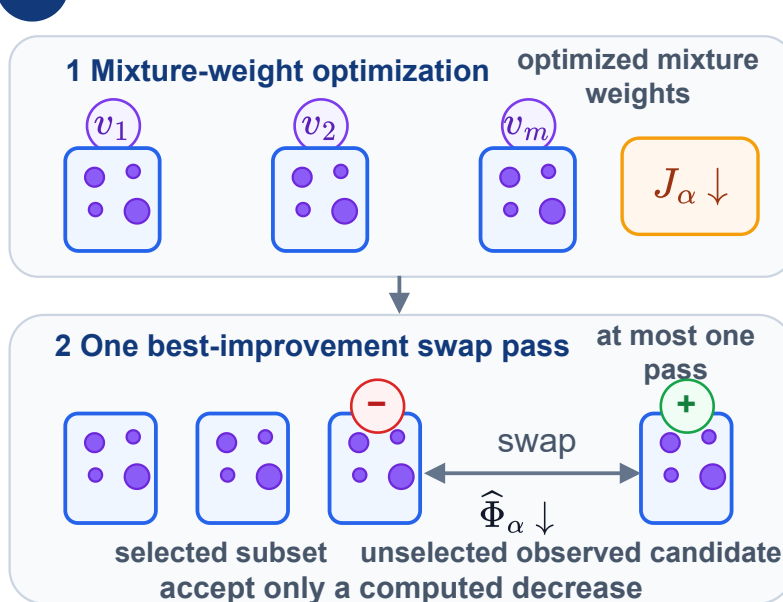

C Observed-subset projection and refinement

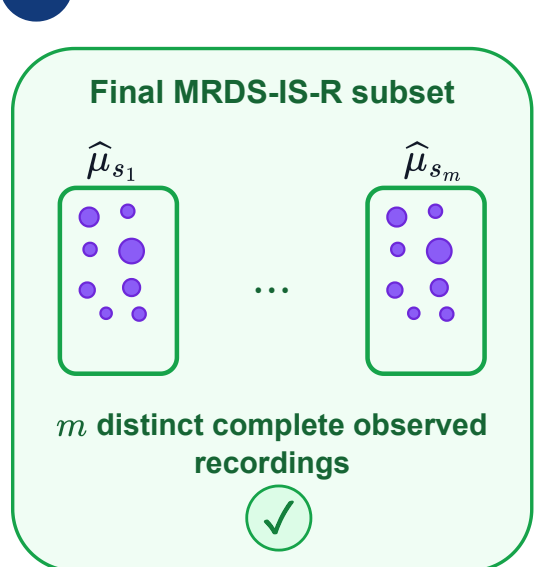

6 Duplicate-free projection

7 Observed-subset refinement

8 Final MRDS-IS-R subset

D Downstream condition-disjoint chatter evaluation
